1. Convolution (50.0%)

k1 = [-1 0 1; -2 0 2; -1 0 1]
k2 = [1 2 1; 0 0 0; -1 -2 -1]

k3 = [0 -1, -1; 1, 0, -1; 1, 1, 0]

k8 = [-1 -1 0; -1 3 0; 0 0 0]
```

```

k7 = [1 2 3; 4 5 6; 7 8 9] / 9
k8 = [1 2 3; 4 5 6; 0 0 0]
```

2. Image Segmentation (50.0%)

After seeing the result of my thresholding function, I noticed the binary image produced was not properly illustrated when compared to using the built in 'binarize' function.

It took me some time to realize that I needed to reshape the image from a 2D Matrix to a 1D Matrix before transforming the image to a histogram and continuing with Otsu's method for thresholding.
